Asif Islam

Lead Software Engineer | CRM and Web Platforms | AI Automation
St. Petersburg, FL | 727-967-5983 | asifislam510@gmail.com | linkedin.com/in/asif-islam-ufl

Professional Summary

Lead software engineer modernizing CRM and ERP platforms, building public websites and Python AI agents, and translating marketing, sales, and executive requirements into shipped software. Uses Codex and Claude Code with reusable skills, automated tests, and human review.

Technical Skills

Development: Python, FastAPI, TypeScript, JavaScript, React, Next.js, Blazor, C#/.NET, SQL
AI and automation: Codex, Claude Code, reusable skills, CodeRabbit, model evaluation, Playwright MCP
Data: SQL Server, stored procedures, dynamic SQL, execution plans, indexes, recursive CTEs
Production: AWS, Azure, Docker, CI/CD, Git, observability, automated testing

Professional Experience

American Power and Gas | Seminole, FL
Lead Software Engineer | November 2025 - Present
Full Stack Software Engineer I | July 2025 - November 2025

- Independently built a Blazor/.NET CMS for the public website using server-side rendering, SQL, and Azure Blob Storage; enabled weekly publishing by marketing and regulatory without developer help and improved SEO and performance.
- Modernized legacy CRM and ERP platforms from complex untyped JavaScript implementations to maintainable TypeScript and C# backends. Lead CRM development for 500 sales reps and 12 supervisors, avoiding over $2M in annual Salesforce costs based on a vendor quote.
- Gather requirements directly from nontechnical marketing, sales, and executive stakeholders; translate workflows into lead routing, follow-ups, quoting, authentication, role-based access control, and live-call handling.
- Built one-click winback checkout with reused customer data and Google Maps API validation; 20 top reps reported an average five-minute saving per sale, corroborated by supervisors. Added UI scaling and higher-contrast themes.
- Converted messy spreadsheets, PDFs, and email attachments into structured SQL tables; built cloud-native file-ingestion services that quarantine, scan, deconstruct, and reconstruct customer files and attachments for safety.
- Co-built a Python call-analysis agent with a Next.js interface, processing thousands of sales calls daily to recover incorrectly blocked leads; evaluated and fine-tuned models with >95% reported production accuracy and human review of uncertain decisions.
- Built a Codex workflow generating fixes, unit and integration tests, and PRs from exception reports; required full-suite CI/CD validation and human approval. Used CodeRabbit checks and caught concurrency bugs in AI-generated diffs.
- Authored reusable SQL, data access, codebase context, and Playwright UI skills; built a learning skill that updates shared instructions from recent work.
- Analyzed SQL execution plans, refactored stored procedures with dynamic SQL, and added missing indexes; reduced a two-lead merge job from minutes to seconds by correcting malformed queries.
- Designed multi-region Azure Functions webhooks achieving 99.99% availability for EDI transactions, demonstrating strong systems thinking

University Athletic Association Inc | Software Developer Intern | May - August 2023

- Rebuilt tutoring workflows with single sign-on and database integrations; created a C# error-reporting library used across 15+ applications and automated SQL checks and CI/CD tests.

Physimax LLC | Web Developer | October 2020 - February 2021
Built the public website for an electronic medical records filing startup using Next.js and React.

Selected Project

GatorStream | Independent University Pilot | May 2023 - May 2025
Built React and Python/FastAPI functionality for a team-driven lecture-streaming pilot; developed Docker services, AWS deployment workflows, CI/CD, and self-healing health checks.

Education

Western Governors University | BS Computer Science in progress | Expected January 2027
